

The Great Pyramids

It's time you learned the truth — the wonders of the world were actually built by aliens. It seems they even left their signature at least once on each of the wonders we've looked at, and indicators on the Great Pyramids to where their signatures can go. If only we could get in touch, I'd want to ask why they stopped.

You should have received five 3D-printed components. You may want to write on them — we've found pencil works best — but be careful not to break them.

Once you've put everything together, read up and down the edges of the pyramid for your answer. Keep in mind that there are no short explanations for ancient history; your answer should be 32 letters long!
